6 November 1956

MEMORANDUM FOR: Mr. F. T. Merrill, Special Assistant to the
Assistant Secretary of State for Public Affairs
Department of State

SUBJECT : HEW and Related Broad Proposals for Exchanges
in the Field of Education

REFERENCE : My memorandum dated 10 July 1956, concerning
exchanges in the field of scientific and
engineering education

1. In order to round out its review of proposals pending in the education field, the IAC Standing Committee on Exchanges has reviewed and approved the attached report, by relevant experts, dealing with the HEW and NYU proposals in this area.

2. You will note that the attached report concludes that a broad exchange in the education field would almost certainly produce net intelligence gain to the US, though most of the field itself is of relatively low priority. We call attention to our referenced memorandum in which we urged that the scientific and engineering field should have the highest single priority and should be arranged, if possible, without awaiting more elaborate arrangement for a series of visits. We continue to take this view.
